

# This is the design document for my Mobile App Project

## 1. What is this project about?

This project displays the weather in the users location using the open weather api. The app will use the device's GPS to get the users location . It will then display it in a forecast. The user will also have the ability to search for a city/ area and have the weather displayed for the city or area they searched.

## 2. Project Breakdown

Full project breakdown can be found on the Projects wiki

## 3. Images of mockup
